

Triangle Furniture Systems

PART OF **PLANMECA** GROUP

Steri-center SCX5™ series

Rigorous with protocol, seamless on integration

Since our beginning, we are dedicated to designing dental furniture that goes beyond just functionality. Our products are carefully crafted with three core principles in mind: **ERGONOMICS**, **ORGANIZATION**, and **INFECTION CONTROL** protocol.

We understand that a comfortable, efficient workspace is essential for both dental professionals and their patients. That's why our furniture is designed to support healthy posture, reduce strain, and optimize workflow—so you can focus on what matters most: providing exceptional care.

Organization is key to a streamlined practice. Our solutions incorporate smart storage solutions, helping you keep your equipment and supplies within reach while minimizing clutter.

When it comes to patient safety, we prioritize infection control. Every piece is crafted with materials that are easy to disinfect and maintain, ensuring a clean and safe environment for both patients and staff.

With Triangle, you can trust that your dental practice is equipped with furniture designed to enhance productivity, comfort, and safety—all while maintaining a modern aesthetic.

We truly appreciate your confidence in us!

Yours Truly, Triangle Team

Triangle's history

In 1991, Triangle introduced the Steri-Center™ 9000, the first sterilization center designed for dental practices. The Steri-Center™ was created on the Instrument Recirculation Process — a comprehensive sterilization protocol developed by Triangle through extensive scientific research into infection control and now the accepted standard by an extensive list of certifying bodies, including the ADA, CDC, OSAP, OSHA, and local authorities.

Since then, Triangle has launched five generations of the Steri-Center™ 9000, and the current model—the SCX5—continues to be the industry standard.

The Planmeca Group acquired Triangle Furniture Systems in 2005, adding cabinetry to its range of state-of-the-art products. Triangle develops and manufactures sterilization and operatory equipment at its factory in Montreal, Canada available through the worldwide Planmeca distribution network.

Triangle's mission has always been to create a functional and supportive environment, while assisting dental staff to comply with recommended performance practices.

The advantages of using Corian®

When designing dental cabinetry, there are many different materials to choose from. One material that is incredibly popular is Corian® Solid Surface. Not only is it a versatile material that continues to be used in a variety of applications, but it is also a safe option.

Corian® Solid Surface is a non-porous material made from a blend of natural minerals and acrylic resin. DuPont developed Corian® Solid Surface in 1967, and since then it has become a popular choice for architects, designers, and homeowners alike.

One of the significant advantages of Corian® is that it is free from silica. Silica is a naturally occurring mineral in many construction materials, including concrete, brick, and stone. When these materials are cut or drilled, they release fine particles of silica into the air that can be harmful if inhaled. These particles are so small that they can penetrate deep into the lungs and cause long-term health problems like silicosis, lung cancer, and other respiratory diseases.

By choosing Corian® Solid Surface without silica, you can help protect the health of factory workers and end users. When Corian® is cut or sanded, it does not release any harmful silica dust into the air making it a safer option for anyone who is working with the material, and high air quality in your home or workplace – Corian® is low VOC and Greenguard certified.

Protect our air quality and respiratory health and choose Corian® with zero silica for your next project. By using Corian®, you can be part of the solution to create a safer and healthier environment for everyone.

Corian® offers several advantages, making it a popular choice for various applications:

- **Durability:** Corian® is highly resistant to scratches, stains, and impacts, ensuring longevity and maintaining its appearance over time.
- **Non-Porous Surface:** Its non-porous nature prevents the absorption of liquids and the growth of bacteria, making it a hygienic option for wet environments.
- **Easy Maintenance:** Cleaning Corian® is simple—most stains can be wiped away with soap and water, and it doesn't require sealing or special treatments.
- **Design Flexibility:** Corian® can be easily shaped and molded into various forms, allowing for creative and customized designs, including seamless installations.
- **Seamless Design:** The ability to create seamless installations reduces crevices where dirt and germs can accumulate, enhancing safety and cleanliness.
- **Repairable:** Minor scratches or damage can often be sanded out, making it easy to maintain its original look without needing replacement.
- **Eco-Friendly Options:** Some Corian products are made with recycled materials, contributing to sustainability efforts.

These advantages make Corian® a versatile and practical choice for countertops and other surfaces in your dental office.
